

Hydrological flow situation in the Niger basin during the month of February was characterized by a continued decrease flow in the basin. Furthermore, dry flow situation was observed at the Upper and the Lower Niger.

Releases of water from Selingué Dam in Mali as well as Kainji Dam in Nigeria continue. The data used for the various analyses below came from the National Hydrological Services and Dam Authorities of member countries.

The flow analysis situation was carried out by dividing the basin into four sub-catchments also represented with reference gauging stations as follows: Upper Niger at Koulikoro (Mali), Inland Delta at Dire (Mali), Middle Niger in Niamey (Niger) and Lower Niger at Lokoja (Nigeria)
