

Within the framework of the Shared Vision process, a study of identification and characterization of the Niger river basin water stakeholders and users has been elaborated around seven (7) topics in order to allow a better involvement of civil society in NBA the institution life and elaborate actions for the basin sustainable development.

---

The themes used as basis for this study are : Agriculture and stockbreeding, Fishing and navigation, Drinking water and sanitation, Ecosystems protection, Dams, Tourism, Mines, industry and craft industry.

This study helps to better know actors, their various forms of organization and structuring, the importance of certain uses of water in the basin. This improved knowledge of uses and users of water resources, and more widely of the basin natural resources, will help to facilitate and strengthen their participation in the Shared Vision process.
